Case Study

E-Wallet Application Design

Simplifying everyday transactions with smart design

Proposed By:
Subiksha M

Visual Design

The design uses a carefully selected purple color palette to convey trust, reliability, and a modern digital feel.

Clean and well-structured typography ensures readability and clear information hierarchy, making content easy to scan and understand.

Consistent iconography is used throughout the interface to enhance usability, support quick recognition, and maintain a cohesive visual language across all screens.

Primary	#5B3CC4
Secondary	#7C6CF2
Accent	#22C55E
Background	#F8F9FD
Surface	#FFFFFF
Text Primary	#1E293B
Text Secondary	#64748B

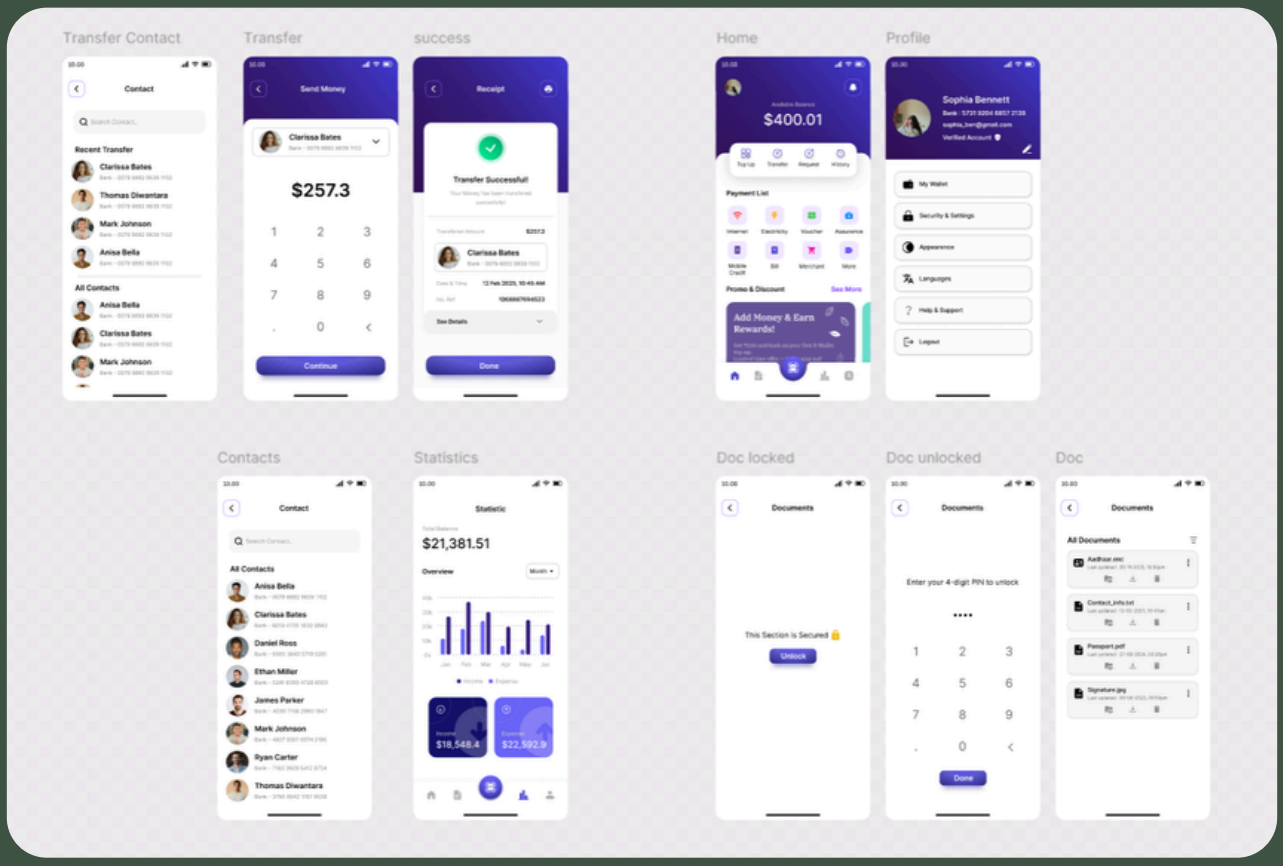
Challenges & Outcome

Balancing simplicity with multiple features while maintaining smooth navigation was a key challenge. Clear layouts and consistent design ensured usability without overwhelming users.

The final design is clean, intuitive, and secure, making digital transactions simple and efficient.

Designed using Figma, applying core UI/UX principles like visual hierarchy, consistency, and user-centered design.

Frames



- Designed a complete end-to-end user flow from contact selection to transaction success
- Implemented contact-based money transfer interface for quick transactions
- Created a numeric keypad input screen for entering amount
- Designed a transaction success screen with clear feedback
- Built a home dashboard showing balance and quick actions
- Added profile screen with settings and account details
- Included a contacts list with search and recent transfers
- Designed a financial statistics screen with visual graphs
- Implemented secure document lock feature with PIN authentication
- Maintained consistent UI design with clean layout and smooth navigation

Target Users

The target users for this application include students and young adults, working professionals, and individuals who are new to digital payments.

These users typically look for fast, simple, and reliable ways to manage their transactions without confusion or complexity.

Students and young users prefer intuitive and quick interactions, while working professionals value efficiency and time-saving features.

Beginners require clear guidance, minimal steps, and a trustworthy interface to build confidence in using digital payment systems.

The design focuses on delivering a seamless, secure, and easy-to-use experience that meets the needs of all these user groups.

Design Process

Research → Wireframing → UI Design → Prototyping — iterative approach with usability testing and refinements.
